

SECURITY OF SHEDS (Anytime)

Security of sheds can be improved:

- Use a good closed shackle heavy-duty padlock with the lock fitting bolted through the door and frame and reinforce with a steel plate behind. The hasp should have concealed screws or bolts
- Strengthen the fabric of the building, place mesh or bars on the inside of the windows
- Battery powered alarms are a useful addition. If you have mains electricity in your shed you could link it into your house alarm if you have one
- Lock your shed and/or outbuildings at all times and keep the keys safe and secure.
